

# Creating Apps and Automated Workflows with Microsoft Power Platform(PL-7001, PL-7002, PL-7003)

---

*Duration: 4 Day(s)*

## Course Overview

---

Transition from the retiring PL-100T00: Microsoft Power Platform App Maker to the new PL-7000 Bundle. This 4-day live instructor-led course combines three official Microsoft Applied Skills courses: PL-7001 (Create and Manage Canvas Apps with Power Apps), PL-7002 (Create and Manage Automated Processes using Power Automate), and PL-7003 (Create and Manage Model-driven Apps with Power Apps and Dataverse).

**PL-7001:** Create your own data model and canvas app to support a scenario for a fictional company. You're provided high-level specifications on the custom tables, columns and canvas app needed to complete this project.

**PL-7002:** Get started with Power Automate by creating and managing automated processes including creating triggers for cloud flows, configuring actions, implementing conditional logic for a cloud flow, testing a cloud flow, creating and configuring approvals, and sharing cloud flows.

**PL-7003:** Build model-driven apps by using Microsoft Power Apps. The skills validated include creating Dataverse tables, modifying forms and views, and configuring a model-driven app. The scenario in this experience represents real-world challenges faced by individuals with business-specific expertise who build model-driven apps.

## Objectives

---

- Design and create canvas apps and automated workflows with Power Automate.
- Implement data visualization and analysis within apps.
- Build and customize model-driven apps using Power Apps and Dataverse.
- Integrate and manage data sources to enhance app functionality.

## Who Should Attend

---

- Business Analysts
- Application Developers
- IT Professionals
- Solution Architects

## Prerequisites

---

Basic understanding of data modeling, user experience design, requirements analysis, and process analysis.  
Comfortable using technology to solve business problems.

## Course Outline

---

### Get started with Power Apps canvas apps

1. Start Power Apps
2. Power Apps data sources

3. Use Power Apps with Power Automate and Power BI
4. Designing a Power Apps app
5. Create your first app in Power Apps
6. Create an app from Excel using Copilot

## **Customize a canvas app in Power Apps**

7. Improve your app by making basic customizations
8. Explore controls and screens in canvas apps
9. Introduction to formulas in canvas apps
10. Create basic screen navigation for a canvas app

## **How to build the User Interface in a canvas app in Power Apps**

11. Use themes to quickly change the appearance of your app
12. Brand a control
13. Icons
14. Images
15. Personalization
16. Build for phones or tablets
17. Create and adjust UI for a new canvas app

## **Work with external data in a Power Apps canvas app**

18. Data-source overview
19. Add a data source
20. Add Office 365 users to your application
21. Display and interact with your data in a gallery
22. Move data between collections and data sources by using Collect
23. Work with external data in a canvas app

## **Write data in a Power Apps canvas app**

24. Introduction to forms
25. Form modes
26. Adding and customizing an Edit form
27. Submit your form
28. Special properties
29. Working with forms

## **Publish, share, and maintain a canvas app**

30. Introduction
31. Application lifecycle management
32. Publish your app

33. Share your app

## **Guided Project - Create and manage canvas apps with Power Apps**

34. Prepare

35. Create a canvas app that connects to a data source

## **Get started with Power Automate**

36. Create your first flow

37. Troubleshoot flows

38. Create recurring flows

39. Monitor incoming emails

40. Share flows

## **Build approval flows with Power Automate**

41. Provide solutions to real-world scenarios

42. Build an approval request

43. Create a business process flow

44. Create a business process flow that has conditions

## **Build flows to manage user information**

45. Introduction

46. Build a flow that uses information like locations or date

47. Build a flow accepts user input when run

48. Create a flow that blocks time on your calendar

## **Power Automate's deep integration across multiple data sources**

49. Build a flow that runs when an event in Dynamics 365 occurs

50. Build a flow that uses SQL

51. Integrate Power Apps, Power Automate, and SharePoint

52. Monitor flows

## **Guided Project - Create and manage automated processes with Power Automate**

53. Prepare

54. Build a Power Automate flow to send automated emails

## **Create tables in Dataverse**

55. Table characteristics

56. Table relationships

- 57. Dataverse logic and security
- 58. Dataverse auditing
- 59. Dual-write vs. virtual tables
- 60. Create a Microsoft Dataverse table
- 61. Import data into your Microsoft Dataverse database
- 62. Create table relationships
- 63. Create a custom table and import data

## **Get started with model-driven apps in Power Apps**

- 64. Introducing model-driven apps
- 65. Components of model-driven apps
- 66. Design model-driven apps
- 67. Incorporate business process flows
- 68. Create a Solution and add an existing data table
- 69. Control security when sharing model-driven apps
- 70. Create a model-driven app

## **Configure forms, charts, and dashboards in model-driven apps**

- 71. Forms overview
- 72. Form elements
- 73. Configure multiple forms
- 74. Use specialized form components
- 75. Configure views overview
- 76. Configure grids
- 77. Create and edit views
- 78. Configure charts overview
- 79. Dashboards overview
- 80. Use interactive streams and tiles

## **Manage solutions in Power Apps and Power Automate**

- 81. Introduction
- 82. Add and remove apps, flows, and entities in a solution
- 83. Edit a solution-aware app, flow, and table
- 84. Build and deploy a complex solution with flows, apps, and entities
- 85. Automate solution management
- 86. Import and export solutions

## **Guided Project - Create and manage model-driven apps with Power Apps and Dataverse**

- 87. Prepare
- 88. Create custom tables

89. Modify forms and views

90. Build a model-driven app
